

CURRENT SOLID STATE LED INDICATORS, CIPM, CIPD

The parameters of the current semiconductor manufacturing CIPM, CIPD

The current through the indicator is set to **the external limiting resistor. With voltage 220 Volts used resistors of the following values**

A - 20 mA 12 k ω 5 W

B - 50 mA - 47 ohms 15 W

V - 70 mA - 33 ohms 20 W

G - 100 mA - 22 ohms 25 W

Table of basic parameters and technical characteristics of **voltage criteria is a semiconductor LEDs , KYPD and , CIPM Go**
